

# BENEFIT of Automatic Transmission

## Keunggulan Transmisi Otomatis

T/C: torque converter : automatic transmission

### Ease of driver performance

Mudah dalam pengoperasian

I will explain the benefit of T/C. Please have a ride and feel it!!

**80% of forklift is T/C (Almost all for Automobile)**

**No need of clutch operation!**

**Ease of finding the operator!**

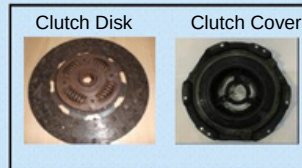

(No need to care about the skill of transmission)

Berdasarkan trend penjualan Toyota, 80% forklift menggunakan transmisi otomatis dengan pertimbangan :

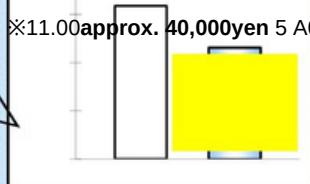

- Tidak memerlukan pengoperasian kopling
- Tidak memerlukan operator yang berpengalaman dalam pengoperasian transmisi

### Cut down of maintenance cost

Murah biaya perawatan

※1) 【Maintenance cost estimation】 200(1000JPY) 150(1000JPY)

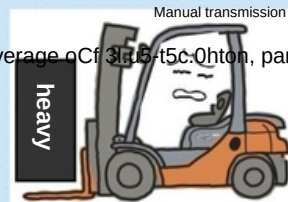

**No need of clutch parts replacement, the maintenance cost will be cut down!**

Dengan tidak diperlukannya penggantian Clutch Disk & Clutch cover, maka akan menghemat biaya perawatan

### Enhance ease of development

Kemudahan Pengoperasian

When lifting the load with manual transmission, it is hard to moderate the handling of acceleration, and most of the time waste race occurs.

Also, due to the load handling of heavy load, the lack of forklift engine failure is more often occurs, comparing with automobile

race of engine

**Automatic transmission can reduce the waste of the engine race!**

**Also, reduction of exhaust gas & noise. Care to surrounding environments!**

Suara & gas buang yang ditimbulkan dari pengoperasian forklift lebih rendah sehingga lebih ramah lingkungan
